

## ERASMUS 2022-2023 SUMMER SEMESTER

**Yaşar University | Türkiye**

**Devrim USLU**

Hello, I am Devrim Uslu. My participation in the Erasmus+ BIP Project organized by the RITM group in Şirince, Izmir, as a student of the Department of Interior Architecture and Environmental Design, created an unforgettable period in my life. Working with students from different countries on projects, discovering new design perspectives, and creating fun memories were truly memorable experiences for me.

Coming together with students from different countries, we drew inspiration from different viewpoints and collaborated on joint projects. Throughout this process, we not only developed our professional skills but also became more proficient in cross-cultural communication. Additionally, we enhanced our ability to find solutions together when facing challenges during project processes. Thanks to this program, I not only expanded my knowledge in the field of interior architecture but also improved my teamwork, communication, and problem-solving skills. Collaborating with people from different cultures not only enriched me professionally but also personally. The time spent with friends from different countries provided an opportunity not only to understand different perspectives in design but also to develop a deeper understanding of various cultures.

This experience positively influenced not only my education but also my life in general. With new friendships, unforgettable memories, and projects we accomplished together, it remains a moment I recall with a smile even now. If I had the chance again, I would go without hesitation.
